

Finding the Perimeter

The **perimeter** is the total distance around the outside of a 2D shape.

To find the perimeter of any shape with straight sides, simply **add together the length of all the sides.**

Finding the Perimeter

The **perimeter** of this triangle is:

$$5\text{cm} + 5\text{cm} + 5\text{cm} = 15\text{cm}$$

The **perimeter** of this rectangle is:
 $12\text{cm} + 12\text{cm} + 8\text{cm} + 8\text{cm} = 40\text{cm}$

Finding the Perimeter: Rectangles and Parallelograms

The **perimeter**:

$$10\text{cm} + 10\text{cm} + 4\text{cm} + 4\text{cm} = \mathbf{28\text{cm}}$$

Rectangles and parallelograms have two pairs of equal parallel sides,
so you could also work it out like this:

multiply 10cm by 2 and 4cm by 2 and add the totals together:

$$10 \times 2 = \mathbf{20} \quad \text{and} \quad 4 \times 2 = \mathbf{8} \quad \text{so} \quad 20 + 8 = \mathbf{28\text{cm}}$$

or

add 10cm and 4cm then multiply by 2:

$$10 + 4 = 14 \rightarrow 14 \times 2 = \mathbf{28\text{cm}}$$

Finding the **Area**

The **area** is the total amount of surface a 2D shape covers.

Area is measured in square units:

squared centimetres (cm^2)

squared metres (m^2)

squared kilometres (km^2)

Finding the Area: Rectangle

The area:

$$10\text{cm} \times 3\text{cm} = 30\text{cm}^2$$

The area:

$$7\text{cm} \times 6\text{cm} = 42\text{cm}^2$$

Finding the Area

You can calculate the area of shapes made up of rectangles by breaking them down into individual rectangles.

The area:

$$10\text{cm} \times 3\text{cm} = 30\text{cm}^2$$

$$6\text{cm} \times 7\text{cm} = 42\text{cm}^2$$

$$30\text{cm}^2 + 42\text{cm}^2 = 72\text{cm}^2$$

Finding the Area of a Triangle

To find the area
of a triangle:

multiply the base \times the height
and divide the answer by 2

$$5\text{cm} \times 3\text{cm} = 15\text{cm}^2$$

$$15\text{cm} \div 2 = 7.5\text{cm}^2$$

$$\text{area} = 7.5\text{cm}^2$$

Finding the Perimeter of a Rectilinear Shape

You can calculate the perimeter of a rectilinear shape by adding together the length of each side.

You may need to calculate the length of any sides not given.

$$a = 6\text{cm} + 3\text{cm} = 9\text{cm}$$

$$b = 10\text{cm} - 7\text{cm} = 3\text{cm}$$

The perimeter:

$$10\text{cm} + 3\text{cm} + 3\text{cm} + 6\text{cm} + 7\text{cm} + 9\text{cm} = 38\text{cm}$$

Finding the Area of a Parallelogram

To find the area of a parallelogram:
multiply the base by the height

$$8\text{cm} \times 3\text{cm} = 24\text{cm}^2$$

See how the parallelogram can be
changed into a rectangle.
